

■■■ Time Study App - User Guide

Getting Started

1. Open the app in your browser:

<https://konradandrag-max.github.io/time-study-auto/time-study.html>

2. The app will open to the main screen

3. Click **"DO TIME STUDY"** button (bottom right) to start a new study

How to Do a Time Study

Screen 1: Enter Study Details

Fill in the study information as you normally would on a clipboard time study. The app will guide you through the form.

Then click **"START RECORDING"**

Screen 2: Record Activities with Voice

Record all your activities without worrying about classification:

- **Timer:** Shows elapsed time in decimal minutes
- **Speak your observations:** Simply speak into your microphone
- **Automatic transcription:** Your speech converts to text instantly (offline, no internet)
- **Press Enter or click button:** Log each activity
- **Focus on recording:** Don't worry about classification yet
- **Continue until complete:** Record all activities, then click **"NEXT"**

Screen 3: Review & Classify Activities

Now classify and finalize your study:

- **Edit descriptions:** Click any description to refine the text
- **Classify activities:** Select the activity type for each:
Int (Internal) | **Ext** (External) | **Wst** (Waste) | **Dly** (Delay)
- **View calculations:** See Standard Time and Normalized Time for each activity
- **Click "COMPLETE STUDY"** to save when done

Main Screen - Your Saved Studies

After saving studies, you'll see them listed on the main screen showing:

- Study details (date, operator, job, part description, etc.)
- Number of activities recorded
- Efficiency % for the study
- Standard time (ST) spent

Star/Favorite Studies:

Click the  **star icon** on any study to mark it as a favorite. Starred studies are easy to track and reference later.

Delete a Study:

Click "Delete" on any study to remove it. **This cannot be undone.**

Viewing Analytics

Click **Analytics** to see detailed reports:

Efficiency Trends:

Line chart showing efficiency over time with filters for operator, date, work centre, etc.

Standard Time vs Actual Time:

Bar chart comparing planned time vs actual time spent.

Activity Breakdown:

Pie chart showing time split across activity types (Internal, External, Waste, Delay).

Exporting Your Data

Click "**Review & Export**" in the main menu to export studies:

Smart Filtering:

Set a date range first, then export! If you filter by date range (e.g., this week's studies), the export will ONLY include studies from that period. This is perfect for downloading weekly batches of studies.

Export All CSV:

Downloads all your studies (or filtered date range) as a CSV file that opens in Excel.

Export Starred CSV:

Downloads only your starred studies (or filtered date range).

Export JSON:

Technical format for data analysis (respects date filters too).

Dark Mode

Click the **Moon Icon** (top right) to switch to dark mode for comfortable reading in low light.

Tips for Best Results

- **Speak clearly:** Voice recognition works best with clear speech
- **Describe activities:** "Machine setup" is better than just "setup"
- **Focus on recording first:** Don't stop to classify — just keep recording activities
- **Classify in the edit panel:** Take your time on Screen 3 to classify and review
- **Star important studies:** Use the star feature to mark studies you want to track
- **Weekly exports:** Filter by date, then export weekly batches for reports

Comparison to Clipboard Method

Clipboard: Write notes → Classify at desk → Transcribe later → Sort by date → Export → Analyze

App: Speak observations (while studying) → Review & classify (in edit panel) → Save → Star important ones → Filter by week → Export filtered batch → Analyze

Data Privacy

■ Your studies are completely private

- All data stays on your computer
- No cloud storage or internet needed
- No accounts or logins required

Troubleshooting

No text appearing when I speak?

- Ensure the speech server is running in Terminal
- Check microphone permissions in your browser
- Speak clearly and wait 1-2 seconds

Can't find a study?

- Check the main screen and scroll through your studies

Activities not showing in review?

- Refresh your browser (F5)
- Check browser console (F12) for errors
